

Transfer from Onename to Browser

1. Download & Install Blockstack

Users will need to install the latest version of Blockstack here:

<https://github.com/blockstack/blockstack-browser/releases>

The screenshot shows the GitHub repository page for `blockstack / blockstack-browser`. The page is for the `v0.18.1` pre-release, which was released 2 days ago by `larrysalibra`. The release features include improvements to the verification process, support for Blockstack IDs without a username, and improved display of usernames pending registration confirmation. A note mentions a change in the Bitcoin wallet storage location. Known issues include temporarily disabled Dropbox support. The download section is highlighted with a red box and labeled "Latest downloads here" with a red arrow. The download links are:

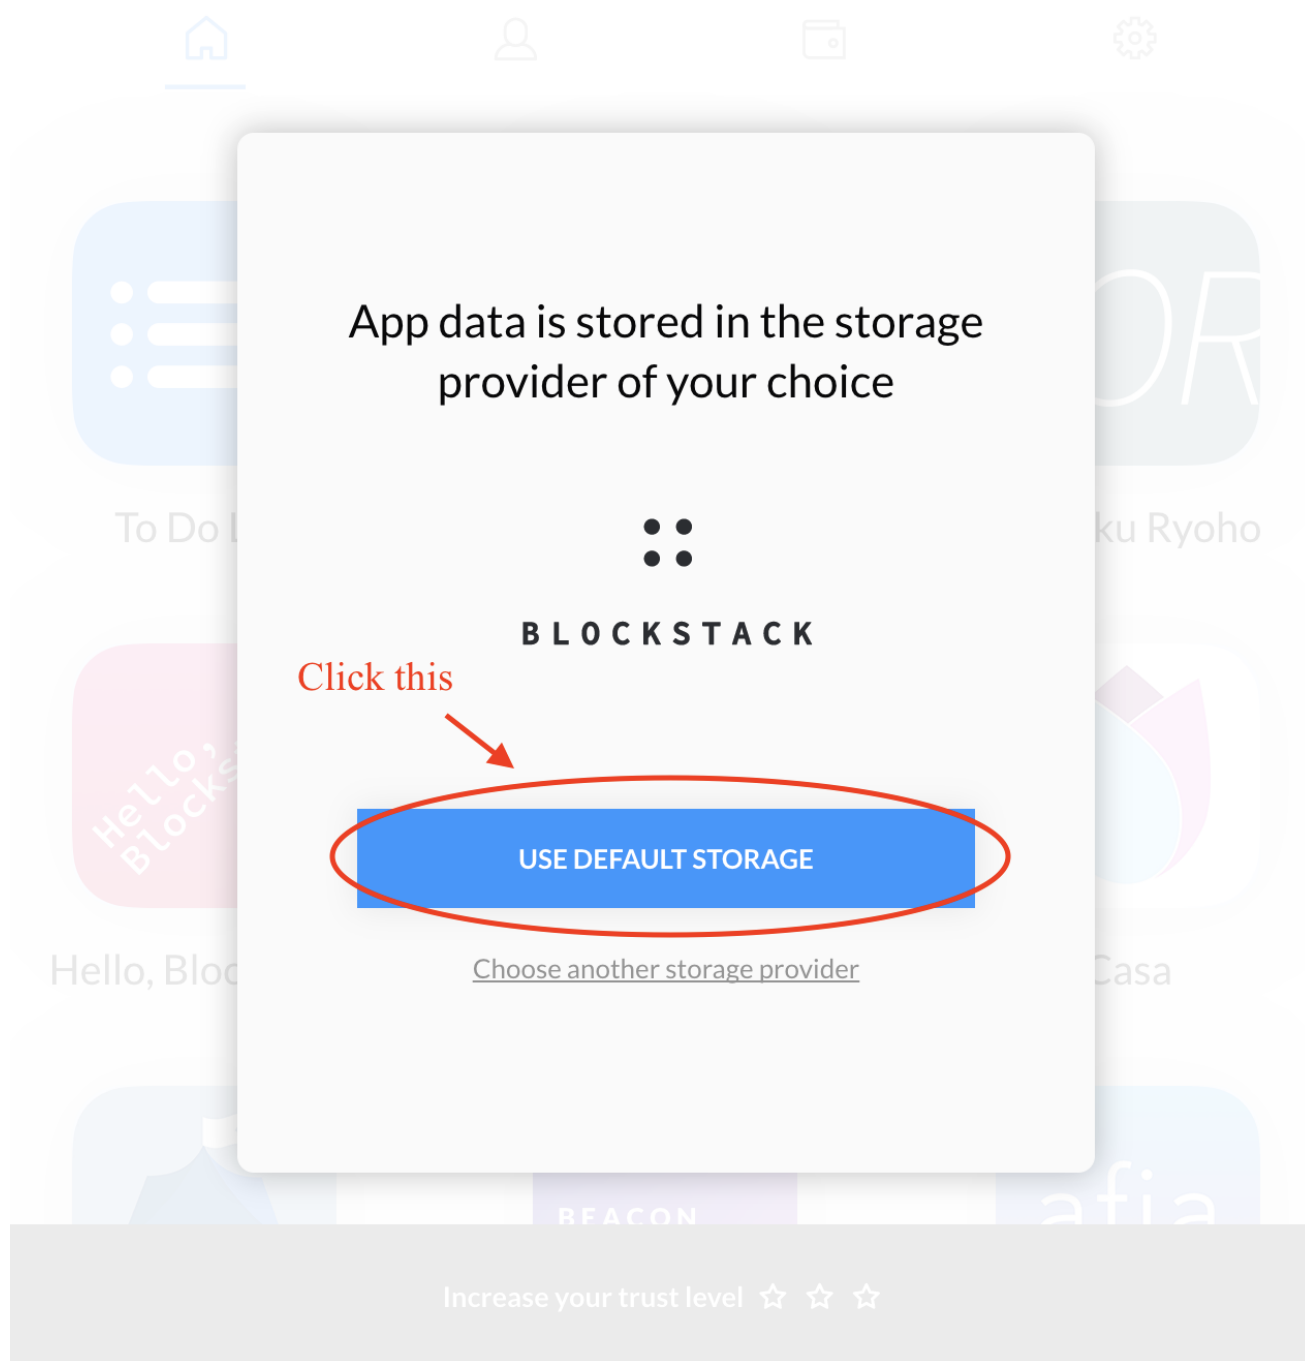

Download Link	Size
Blockstack-for-macOS-v0.18.1.dmg	60.4 MB
Blockstack-for-win10-v0.18.1.exe	163 MB
Blockstack-for-linux-v0.18.1.sh	7.83 KB
Source code (zip)	
Source code (tar.gz)	

2. Go through Blockstack on-boarding process

Once you open Blockstack, you will be:

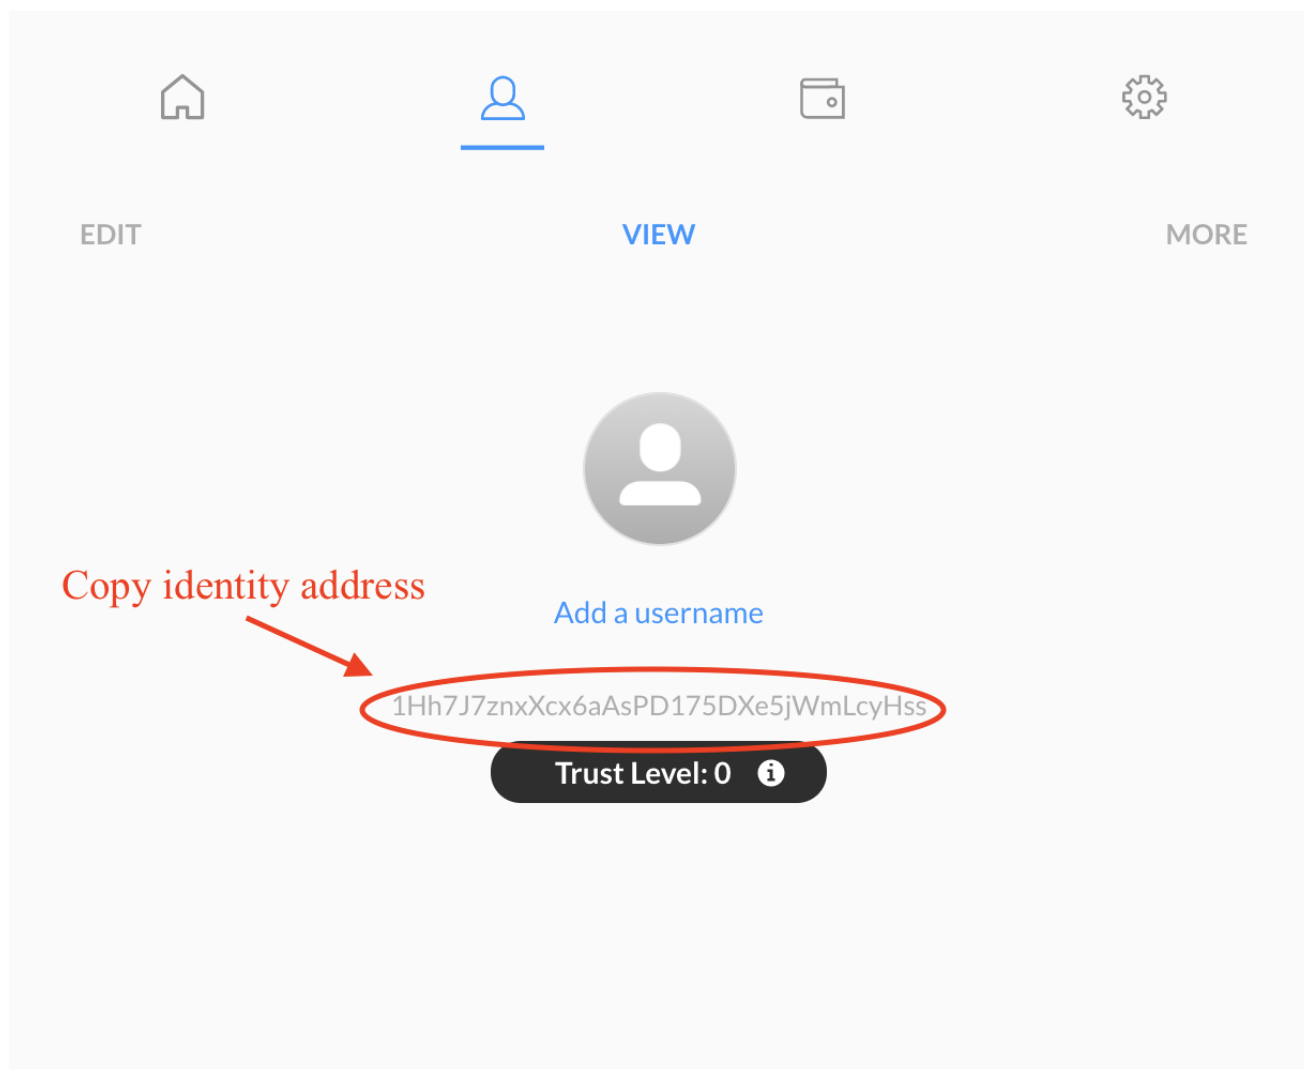

- asked to pick a new password to secure their identity.
- given a new identity key which you should write down and store safely
- asked to provide your email

d. asked to select a storage provider. For now you must select the default storage option to transfer from onename (see below screenshot)

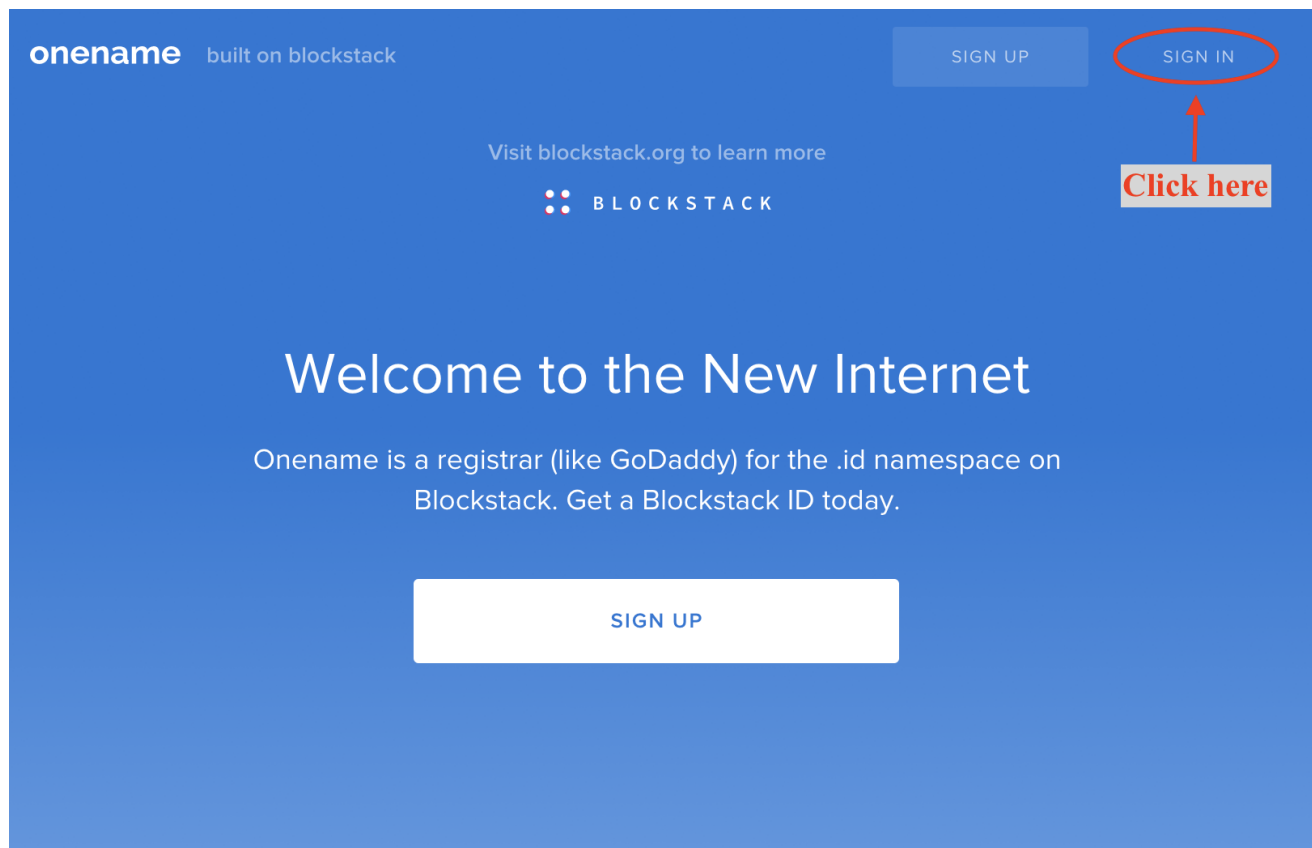

3. Copy identity address

You will need to copy the identity address for your first Blockstack ID. You can get to this screen by clicking on the person icon. You should *not* click "add a username" as this will buy a new username for this ID and cause the transfer process to fail.

4. Go to <https://onename.com>

Click the sign in link.

5. Sign in to Oname

Users should sign in to onename.com with their Oname account info - **not** the info they just got from Blockstack.

EXPORT

9. Wait for export to be processed

After the export has been processed you can go back to Blockstack and your name will appear on the browser. To check the status of your name transfer, you can check the explorer page for your address to see when the name appears in the list of names owned:

<https://explorer.blockstack.org/address/18EJpP1T42rbsCwJPSj9XUUUzZa9Sm9uF3>
